

UniSwap

Project Summary Report — Sprint 1

(Revised After Teacher Feedback)

Group Name: Mugiwara

Date: 23 February 2026

Repository: <https://github.com/sohan0911/UniSwap>

Table of Contents

1. Project Overview
2. Team Members
3. Goals of the Application (Updated)
4. App Accessibility & User Accounts (Updated)
5. Code of Conduct (Updated)
6. Meeting Records (Added)
7. Ethical Considerations
8. User Personas
9. Development Environment & Docker Setup
10. Sprint 1 Summary
11. Planned Scope (Future Sprints)
12. Teacher Feedback Summary & Actions Taken

1. Project Overview

UniSwap is a university-focused web platform that allows students to list, discover, and exchange books and study resources within their campus community. The project aims to reduce educational costs, minimise waste, and encourage collaboration and sustainability among students.

The platform is being developed as part of a group coursework project. Sprint 1 focused on planning, setting up the project workflow, defining the project idea, identifying ethical considerations, creating user personas, and establishing a shared development environment using Docker.

Group Name: Mugiwara

GitHub Repository: <https://github.com/sohan0911/UniSwap>

Kanban Board: <https://github.com/users/sohan0911/projects/1>

2. Team Members

Name	Student ID	Role
Dipesh Kumar Yadav	A00038176	Developer / Team Member
Ankesh Kumar Baitha	A00032339	Developer / Team Member
Sohan Giri	A00032373	Developer / Repository Owner
Rabin Kumar Dahal	A00025045	Developer / Team Member
Ashikha Ambalathuveettil Ashraf	A00024513	Developer / Team Member

3. Goals of the Application (Updated)

Teacher Feedback: The goals of the application were rated as "Decent." Based on this feedback, we have refined and expanded the goals to provide a clearer and more comprehensive vision for UniSwap.

Primary Goals

- Sustainability – Promote the reuse of textbooks and study materials to reduce waste and support a more sustainable campus environment.
- Affordability – Help students save money by enabling them to swap, share, or obtain second-hand books and resources at no cost or reduced prices.

- Community Building – Foster a sense of community among university students by creating a platform that encourages local sharing and collaboration.
- Accessibility – Ensure the platform is accessible to all users, including both registered students and guest visitors, so everyone can benefit from the available resources.
- Ease of Use – Design a user-friendly, responsive web application that makes it simple for students to list, search, filter, and request resources.

Secondary Goals

- Support multiple sign-up methods (Gmail, Apple ID, phone number) to make registration convenient for all students.
- Provide search and filtering capabilities so users can quickly find the resources they need.
- Build a reliable and scalable platform using modern web development practices and Docker-based development environments.
- Encourage collaboration among students across different courses and departments.

4. App Accessibility & User Accounts (Updated)

Teacher Feedback: The app should be accessible by both students and guests (everyone). Users should be able to create accounts with Gmail, Apple ID, or phone number and then access the content.

Based on this feedback, the following access and authentication strategy has been defined for UniSwap:

User Access Levels

User Type	Access Level	Capabilities
Guest User	Public (No login required)	Browse listings, search resources, view resource details. Cannot list items or initiate swaps.
Registered Student	Full Access (Login required)	All guest capabilities plus: list items, request/initiate swaps, manage profile, message other users.

Supported Sign-Up Methods

- Gmail (Google Account) – Users can sign up and log in using their Google/Gmail account for quick and secure access.
- Apple ID – Users on Apple devices can use their Apple ID to create an account and sign in seamlessly.
- Phone Number – Users can register using their phone number and verify via OTP (One-Time Password) for a simple and accessible sign-up process.

This multi-method approach ensures that the platform is inclusive and convenient for all users, regardless of their preferred device or email provider.

5. Code of Conduct (Updated)

Teacher Feedback: The Code of Conduct needs to be updated. The following is the revised Code of Conduct for the Mugiwara team.

Team Code of Conduct

- Attendance at Demos: All team members must be present during class demos. If a member is unable to attend, they must inform the group members in advance with a valid reason.
- Teacher Authority: The teacher has full authority to take disciplinary action if a member fails to attend demos without prior notice. Consequences may include removal from the group.
- Respect & Professionalism: All members should communicate respectfully and professionally in all team interactions, including meetings, chats, and code reviews.
- Contribution: Every member is expected to contribute equally to the project. Tasks are assigned through the Kanban board and all members are responsible for completing their assigned work on time.
- Communication: Team members should respond to messages within 24 hours and keep the group updated on their progress.
- Code Quality: All code contributions should follow agreed-upon coding standards and must be reviewed via pull requests before merging.
- Conflict Resolution: Any disagreements should be discussed openly in team meetings. If unresolved, the matter should be escalated to the teacher.
- Meeting Attendance: All members should attend scheduled team meetings. If unable to attend, prior notice must be given, and meeting minutes should be reviewed afterwards.

6. Meeting Records (Added)

Teacher Feedback: There were no meeting records in the initial submission. The following meeting log has been created to document all team meetings going forward.

Meeting 1 – Project Kickoff

Date	February 2026 (Week 1)
Duration	45 minutes
Attendees	Dipesh, Ankesh, Sohan, Rabin, Ashikha
Location	University Campus / Online (Teams)
Agenda	Project idea brainstorming, group formation, role assignment
Key Decisions	• Decided on UniSwap as the project idea • Sohan will manage the GitHub repository • Created the Kanban board for task tracking
Action Items	• Sohan: Create GitHub repo and invite all members • All: Review project brief and prepare ideas for Sprint 1 planning

Meeting 2 – Sprint 1 Planning

Date	February 2026 (Week 2)
Duration	60 minutes
Attendees	Dipesh, Ankesh, Sohan, Rabin, Ashikha
Location	University Campus / Online (Teams)
Agenda	Sprint 1 task allocation, ethical review, persona discussion, Docker setup
Key Decisions	• Defined Sprint 1 scope: planning and environment setup only • Assigned ethical considerations to Ankesh and Ashikha • Assigned persona creation to Rabin • Docker environment setup assigned to Dipesh and Sohan
Action Items	• Ankesh & Ashikha: Draft ethical considerations document • Rabin: Create user personas • Sohan and Dipesh: Set up Docker compose for development environment • All: Complete assigned tasks before next meeting

Meeting 3 – Sprint 1 Review & Demo Prep

Date	February 2026 (Week 3)
Duration	50 minutes
Attendees	Dipesh, Ankesh, Sohan, Rabin, Ashikha
Location	University Campus / Online (Teams)
Agenda	Review Sprint 1 deliverables, prepare for demo, discuss code of conduct
Key Decisions	• All Sprint 1 tasks completed successfully • Docker environment verified working for all members • Code of conduct agreed upon by all members • Prepared demo presentation for teacher review
Action Items	• All: Be present for the demo • Sohan: Ensure repo is clean and up to date • Dipesh: Finalize project summary document

Note: Going forward, all meetings will be documented with the above format including date, duration, attendees, agenda, key decisions, and action items. Meeting records will be maintained in the project repository.

7. Ethical Considerations

Teacher Feedback: The ethics of the project were rated as "Good."

The following ethical considerations have been identified for UniSwap:

- **Data Privacy** – User data (email, phone number, Apple ID) will be stored securely and will not be shared with third parties. All authentication will use industry-standard protocols (OAuth 2.0 for Gmail and Apple ID).
- **Inclusivity** – The platform is designed to be accessible to all students regardless of their background, device, or preferred sign-up method. Guest access ensures that even non-registered users can benefit from the platform.
- **Sustainability** – By promoting the reuse and sharing of study materials, UniSwap supports environmental sustainability and reduces waste from unused textbooks.
- **Academic Integrity** – The platform will not facilitate the sharing of assignment answers or exam papers. Clear guidelines will be provided to users about acceptable content.

- Fair Use – All users will be treated equally on the platform. There will be no preferential treatment based on any personal characteristics.
- Transparency – The platform will be open-source (public GitHub repository), and users will be informed about how their data is used through a clear privacy policy.

8. User Personas

Teacher Feedback: The personas were rated as "Good."

Persona 1: Alex Johnson – The Budget-Conscious Fresher

Age	19
Year	1st Year, BSc Computer Science
Goals	Reduce spending on textbooks Access study materials quickly Connect with other students
Frustrations	Expensive books, Limited access to shared resources , Buying books used only once
Tech Comfort	High – uses smartphone and laptop daily, comfortable with web apps
How UniSwap Helps	Provides affordable, reusable study materials and connects Alex with peers.

Persona 2: Priya Sharma(Organized High-Achiever)

Age	21
Year	Final Year, BSc Biomedical Science
Goals	Share books to help others, Keep track of what she has lent, Maintain a clean, organized workflow
Frustrations	No central place to manage shared items, Hard to track who borrowed what, Wasted books after finishing modules
Tech Comfort	Medium – uses social media and basic web apps
How UniSwap Helps	Allows Priya to list, track, and manage her shared resources easily.

9. Development Environment & Docker Setup

Teacher Feedback: All members were able to set up the environment and use Docker to create the development environment for the web app. This was rated positively.

The team uses Docker to ensure all members have a consistent development environment. This eliminates "it works on my machine" issues and makes onboarding new contributors straightforward.

Docker Setup Instructions

To start the development environment, run:

`docker-compose up`

This command starts all the necessary services (web server, database, etc.) as defined in the docker-compose.yml file in the project repository.

Environment Verification

Team Member	Environment Setup Status
Dipesh Kumar Yadav	✓ Successfully set up
Ankesh Kumar Baitha	✓ Successfully set up
Sohan Giri	✓ Successfully set up
Rabin Kumar Dahal	✓ Successfully set up
Ashikha Ambalathuveettill Ashraf	✓ Successfully set up

10. Sprint 1 Summary

Sprint 1 focused on project planning and setup. No functional features were implemented in this sprint. The key deliverables completed in Sprint 1 are as follows:

- Created the GitHub repository and organised the project structure
- Set up a Kanban board for task management and tracking
- Defined the project idea (UniSwap) and documented the project overview
- Identified and documented ethical considerations
- Created user personas for the target audience
- Established the Code of Conduct for team collaboration
- Set up a shared Docker-based development environment
- All team members verified their development environment setup

11. Planned Scope (Future Sprints)

In later sprints, UniSwap will include the following features:

Feature	Description	Target Sprint
User Accounts	Sign up/login with Gmail, Apple ID, or phone number; profile management	Sprint 2
Resource Listings	Students can list books and study materials with images, descriptions, and categories	Sprint 2

Search & Filtering	Search by title, author, course, or category; filter by condition, availability	Sprint 3
Swap & Exchange	Request a resource, initiate a swap, and arrange local exchange	Sprint 3

12. Teacher Feedback Summary & Actions Taken

The following table summarises the feedback received from the teacher after the Sprint 1 demo, along with the actions taken or planned to address each point.

#	Feedback Area	Teacher Comment	Action Taken
1	Goals of Application	Decent	Refined and expanded the goals with clear primary and secondary objectives (Section 3)
2	App Accessibility	App should be accessible by both students and guests; support Gmail, Apple ID, and phone number sign-up	Defined guest and registered user access levels; documented supported sign-up methods (Section 4)
3	Code of Conduct	Needs to be updated with attendance and demo rules	Updated Code of Conduct with attendance, demo rules, teacher authority clause, and additional professional guidelines (Section 5)
4	Meeting Records	No meeting records were present	Created a meeting log documenting all Sprint 1 meetings with dates, attendees, agenda, decisions, and action items (Section 6)
5	Ethics	Good	Maintained current ethical considerations; no changes needed

6	Personas	Good	Maintained current user personas; no changes needed
7	Docker / Dev Environment	Members were able to set up and use Docker successfully	Documented environment setup verification for all team members (Section 9)
